

Generate CRUD in yii2

1 Create CRUD

In gii, start the CRUD Generator

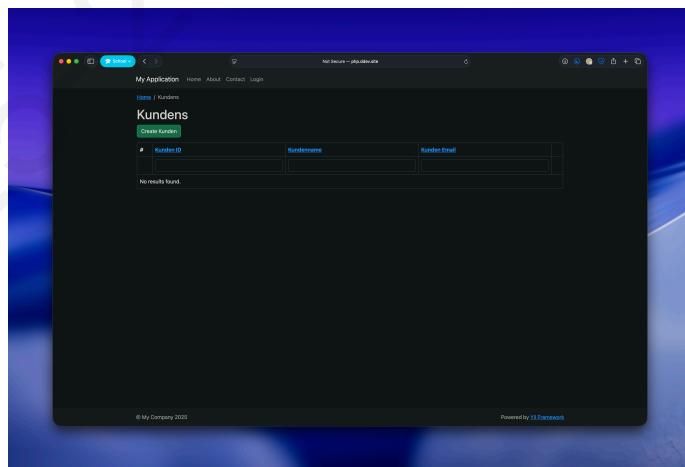

1. **Model Class (e.g. Kunden):** app\models\Kunden
2. **Search Model Class:** app\models\KundenSearch
3. **Controller Class:** app\controllers\KundenController
4. **View Path:** @app\views\kunden
5. **Base Controller Class:** yii\web\Controller
6. **Widget Used in Index Page:** GridView
7. Check the following:
 - ✓ Enable I18N
 - ✓ Enable Pjax
8. **Message Category:** app
9. **Code Template:** default (/var/www/html/vendor/yiisoft/yii2-gii/src/generators/crud/default)

⚠ Note: Some of these are already configured. I just wrote it down if you accidentally edit something

2 Open Page

In your browser, add /kunden to the end (e.g. INSY-3BHITS-PHP.ddev.site/kunden)

You should see something like this:

3 Edit _form.php to Bootstrap 5

Navigate to ~/views/kunden/_form.php

At the top of the file you should see 2 use

Find the following:

```
1 | use yii\widgets\ActiveForm;
```

and replace it:

```
1 | use yii\bootstrap5\ActiveForm;
```

If you want to create a Kunde and the input is blank, now the error is red instead of black (...
cannot be blank)
